SERVICE PARTS

COMPONENTS

- 77958T-4A Single Control Lavatory Faucet
- 77959T-4A Tall Single Control Lavatory Faucet
- 77960T-4A Super Tall Single Control Lavatory Faucet

**Color code must be specified when ordering.

NOTE: For all Asia pacific regions (excluding China) add SP (SPxxxxxx**) in front of the part number when ordering.

INSTALLATION CHECKOUT

Ensure that all connections are tight. Ensure that the handle is in the off position.

Open the drain. Turn on main water supply and check for leaks. Repair as required.

Remove aerator(25) by key(26). Turn the faucet handle on and run hot and cold water through spout for about one minute to remove any debris. Remove any debris from aerator. Shut faucet off and reinstall aerator.

CLEANING INSTRUCTIONS

All Finishes: Clean the finish with mild soap and warm water. Wipe entire surface completely dry with clean soft cloth. Many cleaners may contain chemicals, such as ammonia, chlorine, toilet cleaner etc, which could adversely affect the finish and are not recommended for cleaning.

Do not use abrasive cleaners or solvents on Kohler faucets and fittings.

INSTALLATION

How to Install the Spout

If needed to take off the hoses(1) to repair, reinstall and tighten them by hand.

Insert the lift rod(2) to the hole at the right rear of the body(3).

Insert the faucet assembly into the lavatory hole.

①

Position the faucet, install the screws(7) into the mounting nut(6). From underside of the lavatory, place the washers(4, 5) onto the shank. Tighten the mounting nut to secure the faucet. Tighten the screws.

Attach the hoses to water supplies. The hose with "COLD" label should be connected to cold water.

②

How to Install the Drain

Remove stopper(8), flange(14), washer (15) and tailpiece(13) from drain body (10). Supply enough tape or sealant to tailpiece thread. Reinstall the tailpiece. Insert drain body kit into the lavatory and make sure the drain lever hole(11) facing to the back of the lavatory. Screw the flange with washer into the drain body. Tighten the locknut(12) by hand from the underside of the fixture.

NOTE: If needed, apply a ring of plumbers putty around the underside of the drain flange(14), instead of using washer(15).

Place stopper(8) into drain body aligning the flat side of stopper hole(9) with the drain lever hole.

③

Remove the latch(16) and retaining nut(17). Fit the plastic washer(18) and retaining nut onto the ball lever(19). Insert the ball lever assembly into the drain lever hole and through the stopper hole. Tighten the retaining nut.

Be sure that the ball lever(19) points to the back of the lavatory, tighten the locknut(12) on the drain body by wrench.

NOTE: Do not reposition the drain if plumbers putty applied after the locknut is tightened, or you may break the putty seal. Wipe away excess plumbers putty.

④

How to Install the Lift Rod Kit

Select the connection of the drain and the lift rod according to the dimension of lavatory.

Way 1: Select the latch(16)

Insert the ball lever rod(19) into the bigger hole(21) of the latch(16). Insert the lift rod into the other hole of latch.

Push the ball lever rod down to the open position. Tighten the screw(20) on the latch.

⑤

Way 2: Select the link kit(22, 23 & 24).

According to the lift rod length, bend the link(22).

Connect the link onto ball lever rod with "V" clip(23). Slide lift rod(2) into the hole on link.

Push the ball lever rod(19) down to the open position. Tighten thumb screw(24).

⑥
